Immunogen

Antibody Immunogen Source:	Synthetic phosphopeptide patterned after human HBS1L
Antibody Immunogen Sequence:	VEE(pY)D(pY)EDL(βA)C
Antibody Immunogen Description:	Corresponds to amino acid residues V53 to L61. Effects of Y56 and pY58 phosphorylation on this translation factor are unclear. These are the major <i>in vivo</i> phosphorylation sites in HBS1L with 145 and 256 mass spectrometry reports, respectively in PhosphoSitePlus.
Antibody Target Type:	Phosphosite-specific

Production

Antibody Host Species:	Rabbit
Antibody Type:	Polyclonal
Antibody Isotype:	IgG
Production Method:	The immunizing peptide was produced by solid phase synthesis on a multi-peptide synthesizer and purified by reverse-phase hplc chromatography. Purity was assessed by analytical hplc and the amino acid sequence confirmed by mass spectrometry analysis. This peptide was coupled to KLH prior to immunization into rabbits. New Zealand White rabbits were subcutaneously injected with KLH-coupled immunizing peptide every 4 weeks for 4 months. The sera from these animals was applied onto an agarose column to which the immunogen peptide was thio-linked. Antibody was eluted from the column with 0.1 M glycine, pH 2.5. Subsequently, the antibody solution was neutralized to pH 7.0 with saturated Tris.
